Backend Developer Internship with Darwin

Company: Darwin is a startup company working on creating the Youtube for podcasts. We aim to introduce digital ads into the podcast medium, thereby enabling podcasters to monetize content and advertisers to better target ads. Located right on UCLA’s campus, Darwin has access to cutting edge accelerator office space and a network of talented business leaders. Join us to create, learn, and have a blast!

Internship: We are looking for a strong backend engineer with experience in database to create and manage our backend infrastructure that will work with our front-end iOS and Android apps. You’ll be working in a team with three other developers.

- Located on campus at UCLA Anderson Accelerator space, potentially remote work
- Winter and Spring quarters, flexible hours

Basic Qualifications
- Pursuing Bachelor’s or Master’s degree in Computer Science and related fields
- Strong analytical and communication skills
- Dynamic and creative self-starter

Preferred Qualifications
- Experience developing APIs with JSON
- Experience with DMS (SQL or NoSQL)
- Experience in quality assurance or willing to learn
- Dynamic and creative self-starter

Responsibilities
- Own the database design process for the mobile app
- Participate in all facets of business planning and company presentations as needed
- Liaise on an on-going basis with front-end team for backend development and troubleshooting

Benefits
- Direct Involvements in product management and project management
- Learn about entrepreneurship and venture financing through interaction with members of the Anderson accelerator. Meet top entrepreneurs, investors, and experts
- Gain access to direct mentorship, networking opportunities with business school cohort
- Build skills in business planning, public speaking, and more
