Center for Biophotonics Science and Technology (CBST) Summer Internship for Undergraduate Students

The Summer Internship at the Center for Biophotonics Science and Technology (CBST) is an 8 to 12-weeks program that annually engages 25-35 undergraduate students in exciting, cutting edge, interdisciplinary scientific research in the following areas: Bioimaging, Molecular and Cellular Biophotonics and Medical Biophotonics. Participants work with scientists in a real laboratory environment at UC Davis and participate in a) a "First Week Intensive", an introductory program that includes team/confidence building activities, safety training, basic training in laboratory skill and basics of Biophotonics; b) Weekly workshops designed to support the development of skills in areas related to: résumé writing, public speaking, networking, and career options and c) The CBST Annual Undergraduate Research Symposium scheduled towards the end of the program.

Eligibility

- **Who can apply**: Undergraduate students, sophomores and juniors preferred (only US citizens or Permanent Residents)
- **Home institutions**: Associate or undergraduate degree granting institutions around the country
- **Majors**: Chemical, Biochemical or Biomedical Engineering; Biology, Chemistry, Physics, Biophysics, Biochemistry, Molecular Biology or related.
- **G.P.A.**: 2.8 or above
