Temporary Lab Assistant:

UCLA SMERC is about to receive a battery system from Microvast and we are expected to send one staff/student to help with disassembly and packaging of the system which is currently at EPC power in San Diego. We will also take this opportunity to understand this battery system. The lab assistant is expected to perform the following tasks.

- Rent a passenger vehicle to go to EPC in San Diego on Feb 26th. Book a room and stay in a hotel for 2 nights and perform the tasks. You will come back on Feb 28 after the task is done. SMERC will reimburse you for travel expense.
- You will be guided by technicians from Microvad and EPC power in helping with disassembly and packing of the battery system for shipping. You will learn about the system and take photos and record the wirings, connections, etc of the system.
- You will submit your records/report and photos about the system when you are back.
- SMERC will compensate you for the hours of your task.
