

Applications Engineer

Surfx Technologies, LLC develops, manufactures, and sells surface treatment equipment for the semiconductor, medical device, aerospace and automotive industries. Our products use proprietary atmospheric pressure plasmas to enhance adhesion. A full-time position is available immediately for an Applications Engineer. We are looking for motivated individuals who want to pursue an exciting career building a high-tech enterprise.

Job Description:

The Applications Engineer will be responsible for developing processes to solve customer's materials problems, and for qualifying Surfx's atmospheric pressure plasma for insertion into customer's manufacturing operations. The new hire will work with the sales and engineering team to assist with sales, service and support. The office is located in Redondo Beach, California.

Required qualifications:

- Bachelors or Masters degree in chemistry, physics, chemical engineering, mechanical engineering, aerospace engineering, or materials science.
- Ability to conduct independent experimental research.
- Neat, well organized, excellent note taker, accurate and careful.
- Strong oral and written communication skills.
- Team player who is responsive to customers, coworkers and management.
- Adept with MS Office.

Salary is commensurate with education and experience.
