

We're looking for a superstar full stack software engineer with a focus on mobile development and tons of energy to help us achieve our mission. This is a strategic role with equity in a great startup that is getting a lot of buzz. Seriously, don't take our word for it, check out our feature story by CMU at [balanceposition.com](http://balanceposition.com). This is cool stuff. And we're going to help a lot of people.

You'll bring our wealth of research, personas, wireframes, user stories, etc. to life in the form of an app that engages and delights student-athletes so deeply that it becomes viral. Not fsociety-style, but awesome nonetheless.

You'll architect and build the entire technology stack working side-by-side with our leadership team. This is your chance to show off your talents and build something that will have a positive impact on students and athletes everywhere. And will look great in your portfolio.

You should be proficient in a bunch of these technologies. We're developing for iOS first so the associated disciplines are most important right now: JavaScript, Swift, Xcode, C/C#/Objective-C, React (Native), Python, Node.js, RESTful APIs, noSQL, Git, iOS SDK, iOS HIG, NDK, UX design principles, agile methodologies (did we forget anything?)

Your education:

We don't care about degrees. Show us you can do it and have the same passion we do.

If you're ready to make a real impact on the world, please send your resume and any portfolio/list of apps you've developed to: [recruiter@balanceposition.com](mailto:recruiter@balanceposition.com) or [karastroup@balanceposition.com](mailto:karastroup@balanceposition.com).
