

Great opportunity to work on an open-source, collaborative, web-based Course management system that is being implemented on campus. You can send you resume to harsh@humnet.ucla.edu.

Job Title: Student Programmer, undergraduate or graduate level

Location: Center for Digital Humanities, UCLA

Duration: 2 months (summer quarter)

Responsibilities

- Learn the open-source course management system 'Moodle' and help in testing different features.
- The individual will be responsible for developing/testing features for 'Moodle' which is a PHP based Learning Management System.

Qualifications

- Required: Coding and debugging skills in PHP on UNIX or Windows
- Good understanding of Databases, preferably MySQL.

Desired attributes:

- Familiarity with using a course management system.
- Good initiative in team projects.

Department Overview

The Center for Digital Humanities, UCLA, is a center for development, application and interpretation of digital technologies in research and instruction in the Humanities. To that end, the Center will provide the support and infrastructure necessary to promote the innovative use of technology in teaching, research and public service by the faculty, students and staff of the Division of Humanities, as well as foster an understanding of the implications of such technology in the Humanities.

CDH is currently involved with CCLE, a collaborative initiative on campus, in creating new features for the web-based learning management system – Moodle.
