

Claremont Colleges STEM Initiative

The Claremont Graduate University runs a nationally recognized teacher education program, and there is a new opportunity that might be of interest to students (or graduating B.S., M.A. or Ph.D. candidates). Owing to this NSF grant, CGU is in a position to offer a number of fellowships (5-year, full-pay) that would allow STEM students to pursue a career in high-school science/math teaching. This program specifically targets Science and Math, and after successfully completing this program students would emerge with a Masters in Education and a California teaching credential all virtually debt free. The application deadline is March 1, 2015. Visit www.cgu.edu/ccsi for more information about the Claremont Colleges STEM Initiative. If you have further questions, please email: eddie.partida@cgu.edu
