

Graduate Research Fellowship at CSULA

Deadline: April 4, 2011

Description: The Center for Energy and Sustainability is offering multiple graduate research fellowships in energy and sustainability at the California State University, Los Angeles. Students will join interdisciplinary research teams from engineering, technology, computer science and the basic sciences (see ceas.calstatela.edu for a full list) focused on improving the efficiency of current energy systems and developing novel energy technologies (e.g., biofuels, fuel cells and photovoltaics). We are also interested in issues related to long-term sustainability (e.g., carbon sequestration and transportation planning). Students will have flexibility to develop independent research questions within the context of several projects that address the diversity, efficiency, and sustainability of energy alternatives. Applicants should have a degree in the basic sciences (chemistry, biology, physics), mathematics, computer science, all engineering fields, technology programs, integrated sciences (e.g., geography and urban analysis, earth sciences, ecology, etc), or related fields. The \$30,000 fellowship is guaranteed for 2 years for new students in an appropriate Master's program.

The deadline to apply for graduate admission to the University and the specific department (through <http://www.csumentor.org>) is April 4th for admission in the Fall of 2011. The Center accepts applications for graduate research fellowships throughout the year; however, acceptance as a fellow is contingent upon acceptance to the University. For more information, please contact the Center at ceas@calstatela.edu or at 323-343-5399. The anticipated start date is September 1, 2011; however, earlier start dates (e.g., Summer 2011) are negotiable.
