

The 2011-2012 Hydrogen Student Design Contest.

<http://www.hydrogencontest.org/contest.asp>

This year's competition focuses on the design of a combined heating, hydrogen and power (CHHP) system. This is a great opportunity for students to develop real world design experience. Furthermore, the competition finalists will get their designs published and have the opportunity to present their design at the World Hydrogen Energy Conference (WHEC 2012).

The positive impact of the contest on the students' lives is best summed up in this Department of Energy article:
