

We are currently offering an internship to work at an exciting new start up focused on the college music scene. The startup has partnered with the interactive firm Poets Road (<http://www.poetsroad.com>), a 16-year-old leader in the entertainment industry, to create and maintain the startups online magazine and mobile app.

Interns should be hard working and eager to learn. Skill set required includes fluency in Javascript and some experience with database creation and management in MySQL. Prior experience with Titanium or Word Press would be a plus but is not mandatory. Please provide examples of work and explanation of what you did on the project. School projects are fully acceptable. Interns will work with a Poets Road senior programmer and will be part of our transition to HTML5.

About IndieU (www.IndieU.com):

IndieU provides an easy place for independent music fans to discover tomorrow's artists and for those same artists to reach out and engage with the college music fan base. Three primary parts make up IndieU. The backbone of IndieU is a network of over 40 dedicated representatives at colleges nationwide that provide insight, add reviews, seek out new artists and more. That content is distributed through our state of the art dedicated online magazine with new content added all the time. Finally, IndieU recently introduced a break through iPhone app that allows college music fans access to the best in independent music, share the artists or songs that they love, listen for free, and follow the music tastes of their friends.

The internship will be about 8-10 hours per week. It is an unpaid internship, but if the student is looking for internship credit for school this will be available. (If looking for a full-time internship we can discuss this option as well)

Please send resume and example of work to Mike Bundlie:mike@poetsroad.com and Natalie Edell:natalie.edell@indieu.com

Thank you!
IndieU
