

Infrastructure Engineering at Wish

Our engineers move extremely fast, solving unique and challenging problems. Our team is small and nimble. We release every day to facilitate faster iteration and immediate impact. Each engineer has the opportunity to work on all areas of the technology. They work on entire features, from the database to the client.

Keeping one of the world's biggest mobile eCommerce platforms growing is no easy job, but that's what Infrastructure Engineers are for. Learn what it takes to scale a massive, highly-available platform end-to-end. You'll design distributed systems, validate performance, factor in security, and proactively monitor every corner of our technology. When things do go wrong, you'll be on-hand to fight the fires.

Desired Skills & Experience

An insatiable desire to know how computers work. Data structures & algorithms? No big deal. You can bend Linux to your will, but you know you're still only scratching the surface. You have horror stories of that one time you typo'ed dd and zeroed your partition table. Then fixed it. Our problems start in the application, go through load balancers, databases, caches, networks, kernels, and down to bare metal hardware. Mastering any and all of that is your kind of challenge.

Company Description

Wish brings together top technical talent from Google, Facebook, and Yahoo! Wish, www.wish.com, improves online merchandise discovery by helping users find the products they love, share these products with friends, score great prices, and unlock exclusive rewards. Essentially, it's a digital mall that fits in your back pocket!

Wish was launched in November 2011 and already has over 50 million registered users, making it one of the top 10 mobile applications in both the Android Shopping and iPhone Lifestyle categories. Our incredible growth has not gone unnoticed, as recently recognized by Google as the Best Android Shopping App of 2014!

The Wish mobile app is available on iPhone, iPod Touch, and iPad:
