

Researcher Positions

The Lewis Center/Institute of Transportation Studies is looking for about 25 graduate or undergraduate students to help conduct a variety of field observations, including: 1) manual counts of cyclists and pedestrians 2) parks usage observations and 3) intercept surveys of cyclists. This data collection will inform three distinct research projects: one on bicycle crash risk, one on parks needs in the low-income community of Cudahy, CA, and the third on the greenhouse gas emissions effects of bicycle lanes and paths. Data collection will take place August - October 2015. Bicycle and pedestrian counts will be collected as part of the 2015 LA Bike and Ped Count and will be submitted to the [UCLA Bike Count Data Clearinghouse](#). This is a great opportunity for students with flexible schedules that would like to explore Los Angeles County. You will be collecting crucial data on active transportation and parks.

Number of Hours/Rate of Pay: Students can expect to work 10-20 hours, most of which will be in the field. This will also include a training session on methodology and protocol for the counts or observations. Rate of pay will be based on the Student Assistant III at roughly \$12/hr.

Timeline:

- **Student Training Sessions** - August 2015
- **Data Collection** - September and October 2015

Apply: Please fill out this [form](#) if you are interested in this position.

Please contact Diana Benitez (dianalidu@g.ucla.edu) should you have any questions.

Thank you,

Diana Benitez
