

JOB OPENING

We are looking for an intern or junior engineer who is ready to start a career in a small and growing high tech company. The position is offered as internship or part time for an individual who is studying toward a BS or MS degree in electronics or optics - or full time.

The ideal candidate possesses a keen aptitude for electronics and mechanics with excellent manual dexterity. The candidate must be eager to further his/her knowledge and to learn our technology and processes. The job assignment is testing, assembly of printed circuit boards and engineering for both hardware and firmware plus documentation for our fiber optic sensor products.

This is an excellent opportunity for any aspiring engineer who wants to practice and understand electronics from the ground up.

We offer the necessary training and competitive compensation.

We will accept emailed resumes only.
