

Machine Learning Engineer & Coder needed for full time position in Los Angeles. Work on a cross-functional team including Data Scientists, Researchers, and Coders. Build scalable tools to measure data trends. Develop algorithms and experiments to influence social engineering. Create and maintain data pipelines, dashboards, and data models around our data ecosystem. Prototyping new features and building new ideas by writing code in Python. Implement new approaches with hands on experience in production (Python, Ruby on Rails, Golang and others). Locate or build algorithms for language analysis, and psychographic analysis, as well as user trends. Experience in cognitive and behavioral models a plus.
