

My Friends at UCLA,

I wanted to officially announce that starting on Wednesday afternoon in ENGR IV 38-138, we will be hosting a series of 9 weekly LabVIEW workshops which build up to taking the Certified LabVIEW Associate Developer exam at the end of the quarter. I would love for you all to spread the word to your students, fellow researchers, colleagues, and other who can help disseminate the message. I have attached the image and word versions of the flyers below.

We recently hired a LabVIEW student ambassador, Sandeep Rai ([sandyrai00@gmail.com](mailto:sandyrai00@gmail.com)) from Dr. Tsu-Chin Tsao's lab who will be teaching the course and hosting the exam. Sandeep is a very smart PhD student in one of our most LabVIEW-heavy labs on campus, and he helps TA the ME senior design course using LabVIEW and the DaNI robots. I'm sure he will make a great instructor for people looking to learn LabVIEW!

I would like you to invite you, your friends, colleagues, and students out to this great opportunity to gain proficiency and become certified in one of the most empowering tool chains on the planet. The course includes over \$3000 of industry training, as well as the \$139 dollar exam for free to any UCLA affiliate.

For those of you teaching undergraduate courses, this is a fantastic opportunity for your students to gain great industry skills and build on their course ware, as well as the seal of approval on their resume.

For those in or running research groups, this is a great chance for your entire lab to build proficiency which can dramatically improve lab productivity, capability, and interoperability. No longer will you be stuck with only the one "LabVIEW guy" who you desperately depend on for all of your equipment's operation.
