

Patexia <http://www.patexia.com> is an Internet startup in Santa Monica. Our mission is to build an online community of researchers and innovators where our members can share and learn about the latest technological advancements and innovations. As part of our plan we (with the help of our members) are covering the innovation news from around the world. We have recently started working with students from several schools in California to directly cover the innovation news of their schools (Berkeley, USC, ...). The program is called "Patexia News Correspondent program". We are still in early stages and are formulating it. As part of this plan, we would like to find enthusiastic students on campus (undergrad or grad) who also have interest in writing and journalism. The work load is not much and also provides the student the opportunity to meet with researchers and learn about the latest advancements on their campus while writing small pieces for the community (Patexia Nova News which is maximum of 1000 characters).

At the moment we are looking for three students from the following schools departments at UCLA:

- Electrical Engineering
- Computer science
- Medical

Contact details are below.
