

PROGRAMMING INTERN: Apply your programming skills to REAL-WORLD business problems

May 2015

As a consumer goods company, our philosophy is simple: develop innovative, high-quality products that are affordable to the everyday consumer, and do so while We are a rapidly growing, family-owned manufacturer of pet products and home textiles goods that are sold under various brands that we own. Our customers range from some of the largest retailers in the United States contributing to the betterment of society. Our company was recently announced as the **10th fastest growing company on FORTUNE's Inner City 100** (2014).

As the business continues to grow, so do our technological and software needs. To-date, we have developed various Excel based spreadsheets with built in macros that automate processes like compiling and uploading ecommerce order data to our accounting system or managing gathering and tracking inventory information. While Excel has its limitations, we have found that it is far more powerful and flexible than the current software options for small businesses.

In this internship you will be working on various programming projects focused around streamlining and automating our internal processes. The main programming **language will be VBA**, however, you will also be working with **.NET and PHP**. The experience you will gain here is directly applicable to any company you work for in the future, whether it be a consulting firm, a big corporation, or a small business.

We are a close-knit, family-owned company so you will inevitably have the opportunity to get your hands into and learn about many aspects of the business.

QUALIFICATIONS:

- Proficient in VBA
- Preferred but not required: PHP, .NET

HOURS: At least 15 hours / week

COMPENSATION: This internship is designed for students looking to use their programming skills on real-world business problems. Compensation will be in the form of a weekly stipend.
