

Receive up to \$10,000 Towards Your Master's Degree in Environmental Engineering

About the Funding Program

The purpose of the funding program is to provide an incentive for engineering Bachelor's candidates who have a broad interest in various environmental engineering fields, such as municipal water, wastewater, solid waste, air quality, water resources, hazardous waste, sustainable engineering and energy recovery to pursue a Master's degree in environmental engineering.

Funding up to \$10,000 for tuition and living expenses will be available to students who are accepted in a Master of Science degree program at an approved university and who commit to taking identified required core courses and elective courses. Since the program started in 2005, E2F has given out approximately \$1.1 million in funding.

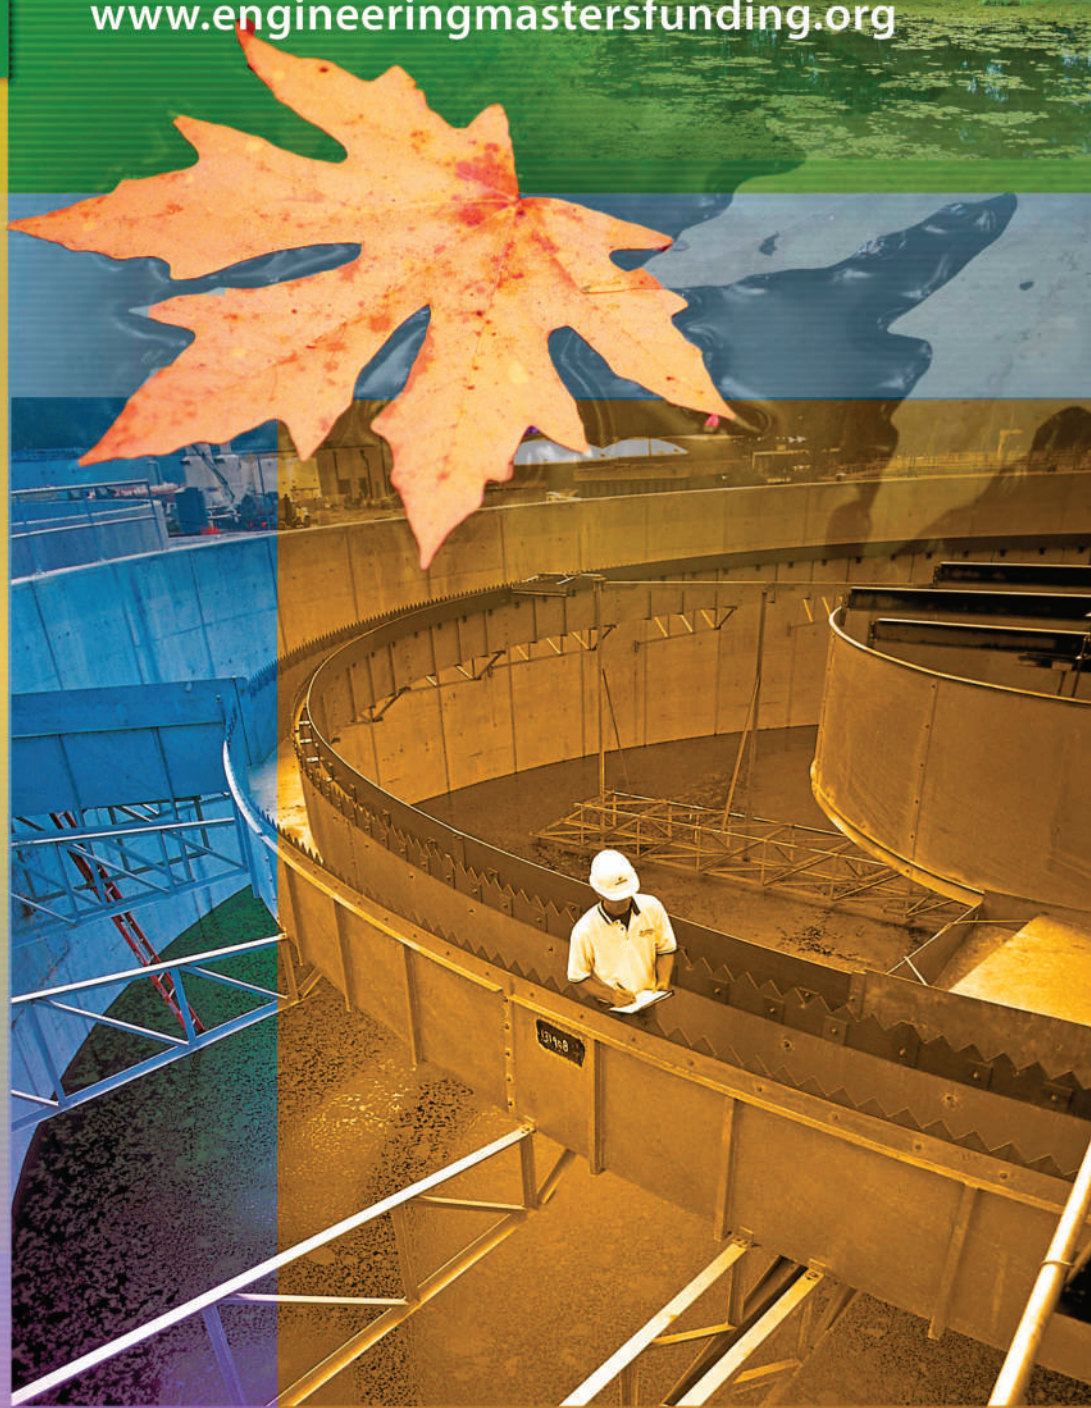

More information about the program, funding partners and participating universities is available at:
www.engineeringmastersfunding.org

a unique partnership between students, universities, and employers

ENVIRONMENTAL ENGINEERS OF THE FUTURE

www.engineeringmastersfunding.org

The vision of this program is to increase the number of highly trained engineers to meet future environmental challenges.

- Up to \$10,000 towards a MS in Environmental Engineering
- 65+ participating Universities
- Early application period opens in October
- Make A Difference!
