Are you experienced with
Machine Learning?

Project Description:

We are currently engaged in a study in which we are reading law enforcement narratives about the suicide and homicide of racial/ethnic minorities and LGBT populations. Our goal is to use machine learning to better understand the narratives for risk factors associated with the life of this person. Our purpose is to help make these narratives more useful for learning how to identify factors that could be helpful for program interventions.

Requirements:

Must be trained in machine learning. 4-6 hours per week.
