

Seeking Coder for Paid Internship

The ideal candidate should desire a college or graduate program internship credit as well as a cash payment for successful completion of the coding. Site is 85% complete but requires some database work to finish and minor front end clean up. The intern should be skilled in php, html, and mySQL.

This is an opportunity to get involved with a ground breaking start up. Plus, there is opportunity for on going employment after site completion with pay to develop apps and maintain the site, which will be rebuilt within a year of launch. There is a lot of upside and opportunity to advance once the site is up and running.

Please send email with resume and a cover letter, in the body of the email itself, to:
