Symantec's **STAR TEAM** is looking for **talented** and **passionate** engineers in the Los Angeles area!

In Security Technology and Response, you will have the opportunity to be a part of a global team that provides the underlying security technology, content, and support for all Symantec corporate and consumer security products. As an engineer in Symantec's Security Technology and Response (STAR) organization, learn how to apply sound engineering and cross-platform design concepts to commercial software development, turning research into reality and achieving true customer impact. Open positions include internships, software development, software development in test, and program management.

Prospective engineers should submit their resume to:
