

Senior Aerospace SSP: Internship

Senior Aerospace SSP in Burbank, CA designs, analyzes, manufactures, and tests high pressure pneumatic ducting and ECS systems for use on commercial and military aircraft applications. We have a team of 12 Engineers and are looking for an Intern in the Fall who could come in and help with many tasks. As an intern here, the student may be exposed to Finite Element Analysis of ducting systems, flow pressure and thermal analysis, certification requirements for new aircraft, misc qualification tests including vibration, fireproofness, flow, and endurance, amongst other aspects of Engineering that I feel will give valuable experience moving forward.
