

# Energy Analyst Rotation Program

## Transform Your Future

### Apply today for your chance to...

- Participate in a unique two-year rotation program designed to develop sophisticated analytical skills and provide a broad introduction to power procurement and the energy industry.
- Gain experience in electricity and natural gas trading, energy operations, contract negotiations, risk management, portfolio valuation, regulatory policy and strategy, green energy development and more.
- Work with some of the brightest people in the energy industry – a high-powered team of MBAs, lawyers, economists, and engineers – and have substantial responsibility and management visibility.
- Work with a Fortune 500 energy company that provides competitive pay and excellent benefits.

### As an Energy Analyst, you will...

- Research and interpret market data related to electricity and natural gas trading and contracts, market monitoring, resource forecasting, portfolio optimization, risk assessment, and energy commodities pricing.
- Contribute to key strategic decisions by gathering numerous forms of data and conducting complex analyses, developing and presenting findings, and assisting in the implementation of the recommendations.

### Successful candidates will possess...

- A bachelor's degree in business, economics, engineering, math, sciences or any other majors where quantitative analysis is required. Those with an advanced degree are also encouraged to apply.
- Strong problem-solving skills, ability to perform detailed quantitative analysis, high level of proficiency in computer applications, and strong written and verbal communication abilities.
- "Team player" mentality, with strong interpersonal skills and proficiency interfacing with all levels of employees, including senior management.
