

## Stink Studios

Stink Studios is looking for an Experienced Django Developer to lead development of a content platform API

As a member of the Stinkdigital team, you'll work alongside our Technical staff to architect and build an API-centric content platform. You can jump in on day-one to develop a backend application that sits at the intersection of a custom CMS and data consumed from multiple third-party APIs.

### **What you'll do**

- Develop a long-lasting platform to provide OAuth authentication and API endpoints to support a website, app, and software installation;
- Create a custom CMS that is usable, clear, and easy to use;
- Be proficient in Python and Django;
- Be experienced in developing and documenting high-performance APIs;
- Work with our team to make decisions about platform architecture and API design;
- Write scalable, performant, and maintainable code;

This position is for a 6-10 week engagement. Priority will be given to Developers that can work out of our Los Angeles office. Applicants should have at least 3+ years experience in a backend or full-stack developer role. When applying, please include links to projects and relevant source code examples.
