Symantec Internship Opportunity

```
I am an undergraduate at UCLA, and I recently finished the last day of my
internship at Symantec.  I quit because my schedule is too heavy this term to
juggle all my classes and work, so my boss asked me to send an email to UCLA
to see if there are any interested students to take my position.  The
internship description is as follows:
My Name: Ryan Evans
Major: Computer Science Undergrad
```

Company Overview

```
Symantec is a global leader in providing security, storage and systems
management solutions to help our customers ? from consumers and small
businesses to the largest global organizations ? secure and manage their
information-driven world against more risks at more points, more completely
and efficiently. Our software and services protect completely, in ways that
can be easily managed and with controls that can be enforced automatically ?
enabling confidence wherever information is used or stored.
```

Department Overview

```
Symantec's Consumer Business Unit, the team that brings you the trusted
"Norton" security, storage and systems management products, is looking for
talented individuals to work on the next generation of industry leading
products, technologies and services.  Join Symantec?s Consumer Business Unit,
the world?s security market share leader for consumer software and services,
and be a part of the team protecting hundreds of millions of customers
worldwide.
```

Responsibilities

```
-This position will involve working closely with Product management, Quality
Assurance as well as other Software Engineers to come up with solutions that
help improve the speed, security and usability of our software.
-As a Software Engineer you will be responsible for understanding
requirements and needs of customers / project goals all the way to writing
the last bit of code that goes into production.
-Author complete sections of functional spec/design, under supervision or
guidance of more senior development team members.
-Designs, develops and maintains high-quality code for simple to complex
components of a product, focusing on implementation.
-Follows the software lifecycle process when developing software.
-Collaborates with team members or other groups in writing functional,
design, and interface specifications and prototypes.
-This position will require strong problem solving skills as well as a solid
programming background.
```

Qualifications

```
-0-2 Years of Strong C/C++ fundamentals and extensive code writing experience
```

with C++ in a Win32 environment.
-Good Debugging Skills in Visual Studio and comfort in advance debugging
techniques in the IDE.
-Strong Computer Science background knowledge of networking, operating
systems, programming languages and algorithms.

I would describe it more succinctly as:

This is a software development intern position working on the Norton 360 code
base. Most of your work will be specifically with the Tuneup and Backup
components of the Norton 360 software suite. The main responsibilities of
this position are to implement new features for the upcoming release, and to
fix defects that are found in the code. Additional responsibilities include
doing smoke tests on the development builds and writing SQL queries to help
analyze the anonymous data returned by the product to our company. Some of
the cool things about an internship at Symantec are that morale is high, and
the environment is both laid back and friendly. In addition, you write
production code that is actually used by millions of people, which not all
internships allow. These two factors help to make it a very fulfilling
internship.
