

## Apps Developer

Sysrepublic Apps developers work in teams and are responsible for creating web applications on top of our existing Sysrepublic Secure platform. We follow Sysrepublic Agile software development methodology and expect the candidate to be comfortable in a fast-paced and flexible environment. We are looking for individuals who are fast and self-starting learners, critical thinkers and problem solvers by nature. Can-do attitude is at the very foundation of our company culture.

### RESPONSIBILITIES:

- Developing prototypes and production code for web applications targeted at Retail Operations space.
- Developing interactive presentation-layer code, using HTML5, CSS3, jQuery, and JS.
- Evaluating the technical tradeoffs of every decision
- Researching and developing robust, lasting and scalable code libraries and re-usable components
- Working closely with the Platform Development Team to integrate applications into the existing Sysrepublic Secure platform.

### REQUIREMENTS:

- Degree in computer science or related field or equivalent work experience.
- Passion for creating modern, fast, user-centric web applications.
- Strong collaboration and communication skills, both verbal and written
- Excellent front-end skills – HTML, CSS, JavaScript, jQuery and experience working with open-source JS libraries (We work with Angular.).
- Experience using scripting technologies
- Excellent time-management and organizational skills.
- .NET development experience a plus
- Answer to the following question – what is the first thing you would like to build at Sysrepublic?

### BONUS POINTS

- Candidates with GitHub portfolios (or other online repositories)
- UX/UI skills and experience working with Photoshop/Fireworks/Sketch etc.
- PowerShell experience
- SQL skills are a major plus
- Experience working with retail operations systems
