Sysrepublic

We are an award winning software, services and consultancy provider focused predominantly on the Retail and Hospitality industries. We are the undisputed thought leader in our target space and we just can't stop getting better at what we do. As we grow our global brand, we are looking to expand our team with truly exceptional people.

We are looking to recruit a Data Analytics Engineer to join our US Solutions Delivery team based in our Los Angeles office.

This position offers a superb opportunity to work on a number of different client projects with some of the world's most renowned organizations. We are not going to drop names here…because we've already done so on our website: https://www.sysrepublic.com/clients/

Successful candidates will be working with and learning from like-minded professionals in a rapidly growing, dynamic and leading-edge company, where excellent career prospects are provided. Sysrepublic employees are out-going and true problem solvers, able to function across multiple aspects of project lifecycles: requirement definition, analysis, solution architecture, documentation, development, rigorous testing, implementation and support.

What you will be doing at Sysrepublic

- Solving unique and challenging problems in the field of data analytics and systems integration.

- Help technical teams deliver both on-site and cloud solutions to our services.

- Coming up with creative solutions while at the same time maintaining a laser focus on getting things done.
- Recognizing the opportunities for and building internal tools that will speed up our delivery rates and make us an even more efficient organization.
- Upholding the highest software quality standards. We take special pride in delivering bullet-proof software solutions.

- Understanding and executing the defect management and software release processes

- Delivering bullet-proof technical documents and specifications.

- Optional: Competing in our daily mini golf competitions and NERF target practices

Desired Skills and Experience

- An enthusiasm for technology and the ability to quickly pick up new technologies is vital to be a successful a Sysrepublic Technical Intern.
- Although our work is based primarily on Microsoft stack (C# .NET and MSSQL with Reporting Services, Windows Workflow Framework), we do not discriminate against any Complete Languages. If you have an incredible project in your portfolio – we want to hear all about it, regardless of the platform it was built on. Having solid experience working with Microsoft development technologies will definitely give you an edge and an easy learning curve should you join us.
- Humor. We like to have funny people around.

Office Location

Our LA base is a shiny new office space in Torrance, we have a mini putting green in the office, endless fantasy sports leagues, team building activities and our dress code is…well, we're still trying to figure out how to defined it, since some of our board executives are known to walk into the office in a t-shirt, shorts and flip-flops on regular basis. We think this is probably a side-effect of having an office less than 2 miles away from the beach. In short – we're reasonably casual. Luckily, Del Amo Fashion Center is right next door, so we know how to look the part when we work with our clients. Also within walking distance- all the restaurants and coffee shops you can think of.
