

Technicolor Electrical Engineering Internship

Technicolor is looking for an electrical engineering intern who is on a BS or MS track (if BS, preferably in his/her sophomore, junior or senior year.)

This individual would support our lead electrical engineer on a prototype Development effort that will result in a functional hybrid set-top box/ Gateway/ NAS product for CES in January 2012. This is a role that would require a commitment of approximately 15-20 hours / week at a pay rate of roughly ~\$15/hour. The ideal candidate would be able to work for us for approximately 6 months (thru Jan 2012), at which time we would probably cycle in a new candidate.
