

The Aerospace Corporation Internship Opportunities

Openings range from Software, Electromechanical, Navigation, Electrical Power, Communications, and more.

Most internships are in El Segundo, but there is one in Chantilly, VA.

The company is big on STEM initiatives and is an opportunity for students to work with engineers and scientists who are national assets to the US Government. We have laboratories that perform experiments and investigations no other company can perform, because we have the equipment and expertise. This is also an opportunity for students to potentially participate on projects that will impact National Security or Capabilities. Our main thrust is with space technology and architecture, satellites, launch vehicles, and ground systems. So, we need a variety of experiences, expertise, and backgrounds to be successful.

You can find the openings here:
