

Coding Instructor for kids and teens

Coding instructor for kids and teens

Our Instructors are the most important employees of UCode. Although we believe we've developed a world class curriculum, there is a line where our curriculum ends and a student begins. The size of this gap will vary from student to student, but it is the job of our instructors to close this gap. As teachers, we can offer context, give advice, and connect new ideas in creative ways unique to each student. This would be exceptionally difficult- and likely impossible- to do with a computer alone. That is why we have instructors and how we separate ourselves from online programs.

Job Duties:

- Guide 6-to-19-year-old kids through programming curricula
- Master Functional Programming
- Develop classroom management skills
- Continuously refine communication skills--especially verbal skills
- Help students develop their own personalized projects
- Learn advanced learning strategies

Qualifications:

- You possess a relentless passion for Education and Computer Science
- You enjoy working with kids of all ages
- Proficiency in one or more programming languages
- Strong verbal communication skills
