

Full-Stack app developer Intern at Lagohm

We are a new & growing mobile app startup based in Culver City, CA.

The Company: Lagohm is a marketplace app platform for restaurants to post real-time discounts and develop repeat customer base. Lagohm is focused to solve 2 critical pain points for both restaurants and users;

1. Helping customers save money on eating out; no crappy BOGO deals or terms and conditions
2. Helping restaurants get new customers and increase the retention rate

It is difficult to give discounts to customers and keep them coming back to a restaurant without a discount. With Lagohm, restaurants will not only get new customers by giving discounts, but also make them return during off-discount times. Customers, on the other hand, save money either way!!

We believe in making life easy for all types of restaurants with limited tech resources, to get new customers and keep calling them to enjoy their best-in-town food. For Customers, we want to enhance their experience at their favorite restaurants while saving a ton of money doing that. Lagohm's MVP is being launched around the end of April and we need help moving forward from just an MVP to Product market-fit.

The Position: We're seeking someone with experience working in a developer role. Preferably a senior or a masters student graduating in Spring '18 and majoring in Computer Science, but Juniors or First year master's students may also apply. The value you can contribute to the team are much more important than years of experience or titles. You must believe in the startup's idea and have an entrepreneurial mindset.

- This position is an opportunity to work full-time
- If shown technical proficiency and entrepreneurial spirit, you may be offered equity post internship
- If you have experience with back-end or front-end only, feel free to apply

Requirements:

- You should have a solid understanding of the full stack involved in building best-in-class mobile and web applications and the back-end magic that it takes to make it all hum.
- You must be able to handle large volumes of data and strong database skills are preferred.
- You are also comfortable working in an agile development environment, where requirements and goals might rapidly evolve as we listen to and learn from our users.
- You must be willing to sign an NDA

Technical Skills:

- Proficient knowledge of front-end and back-end programming languages PHP, HTML, Python, Ruby, JavaScript (React), React Native, MySQL, etc.
- Mobile App development: iOS (Swift) and Android development
- Hosting: AWS and Firebase
- Communication: GitHub and Slack

You must have good understanding and knowledge of some or all of these technologies, or at a minimum, related technologies that would enable you to learn what is necessary to start contributing quickly. Most of all, you must have a passion to code.

Responsibilities:

- Design of the overall architecture of the web and mobile applications
- Implementation of a robust set of services and APIs to power the web application
- Building reusable code and libraries for future use
- Translation of UI/UX wireframes to visual elements
- Integration of the front-end and back-end aspects of the web application

The Location: Lagohm is based in WeWork Culver City, CA. You will be offered a WeWork membership and access to the facility's resources.

Why Should You Apply?

- You work your own hours and do everything your own way
- You build your own company culture
- What you do, say or think matters, A LOT!
- NO FORMAL CORPORATE CULTURE...
