

blueEnergy Internship

blueEnergy is an international non-profit that works to bring renewable energy, clean water, and other related services to communities living beyond the edge of the market. Our efforts are currently focused on the Caribbean Coast of Nicaragua, an area in which over 75% of the population lacks access to electricity and clean water services.

One critical aspect of our organization is our internship program. The internship program is a 1-12 week program for students interested in renewable energy, clean water, and/or development work. For those interested, we offer Spanish immersion courses. Would you mind passing information on regarding our internship program to your student body? This may be a great opportunity for your students who are interested in gaining hands-on experience in a complex and challenging environment.
